An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows to correct minor errors in the description.

IN THE DESCRIPTION:

On page 4, line 30 (the last line on the page), delete "value" and insert -- valve --; on page 6, line 3, delete "241, 243" and insert -- 291, 293 --.

The following is an examiner's statement of reasons for allowance:

The prior art fails to anticipate or properly render obvious a rotating supply and exhaust valve for multiple individual lines including a plurality of rotary passages "terminating at first ends in a series of rotating-valve ports spaced around (the) perimeter (of the rotor) and respectively terminating at second ends in a plurality of rotating-valve apertures radially disposed in a first valve face of said rotating-valve body over a plurality of radii from (the rotational) axis"; a stator including "arcuate grooves inscribed in said second valve face at radii corresponding to and in alignment with said plurality of rotating-valve apertures, a stationary-valve bore extending from each of said arcuate grooves terminating in a stationary valve aperture in a third valve face opposing said second valve face, a fluid cavity inscribed in said second valve face in arcuate radial alignment with and spaced apart from said plurality of arcuate grooves in fluid-

flow communication with a stationary valve port in said stationary valve body; and a changeover valve" permitting selective operation of any one or all of the individual supply and exhaust circuits provided in the valve including a changeover valve body having a fourth valve such that "wherein fluid pressure from (the) source of fluid pressure is ultimately applied to all of said rotating-valve ports when said orientation of said (changeover valve) is in said first one of said selective orientations, and wherein fluid pressure from said source of fluid pressure is ultimately applied to at least one predetermined one of said rotating valve ports and at least one of said rotating-valve ports is in fluid-flow communication with said second source of fluid pressure equal to or greater than atmospheric pressure when said (changeover valve) is in (the) alternate one of said selective orientations" as required of all claims in this application.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
